Acceptance Testing

UAT Execution & Report Submission

Date	18 Feb 2026
Team ID	LTVIP2026TMIDS84828
Project Name	Financial AI Analyzer – Transforming Complex Data into Actionable Insights
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to summarize the test coverage, validation results, and system stability of the Financial AI Analyzer application at the time of release for User Acceptance Testing (UAT).

This report confirms that the financial dataset analysis module and AI-based financial assistant module were tested thoroughly and are functioning according to the defined system requirements. It also highlights defect analysis, test coverage, and test case completion status prior to the final project submission.

2. Defect Analysis

2.1 Functional Coverage Summary

Section	Total Cases	Not Tested	Fail	Pass
Financial Data Upload & Validation	6	0	0	6
Financial Data Analysis Module	4	0	0	4
AI Financial Assistant Module	4	0	0	4
Performance & API Handling	3	0	0	3
Session & Error Handling	2	0	0	2
Total	**19**	**0**	**0**	**19**

2.2 Bug Resolution Summary

Since the project was developed in a controlled development environment, most issues were identified and resolved during development. As a result, no critical or unresolved defects remain in the system at the time of UAT execution.

Resolution Type	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
Fixed During Development	0	2	3	2	7
By Design (Expected Behavior)	0	1	1	0	2
Duplicate	0	0	0	0	0
Not Reproduced	0	0	0	0	0
Won’t Fix	0	0	0	0	0
Totals	**0**	**3**	**4**	**2**	**9**

3. Test Case Analysis

This section summarizes the number of test cases executed, passed, failed, and not tested for each module of the Financial AI Analyzer system.

Module	Total	Not Tested	Fail	Pass
Dataset Upload & Validation	3	0	0	3
Financial Data Analysis	3	0	0	3
Financial Query & AI Insights	3	0	0	3
Financial Recommendations	1	0	0	1
Domain Restriction Handling	1	0	0	1
Performance Testing	3	0	0	3
API Stability & Session Handling	2	0	0	2
Total	**16**	**0**	**0**	**16**

4. UAT Conclusion

The Financial AI Analyzer application successfully passed all functional, performance, and stability testing scenarios.

Key observations from the User Acceptance Testing include:

- Financial dataset upload and validation work correctly.
- AI-based financial analysis generates structured insights, charts, and summaries.
- The conversational financial assistant provides reliable responses and recommendations.
- Domain restrictions ensure the assistant responds only to financial-related queries.
- API integration remains stable during repeated queries and dataset processing.
- No critical or high-severity defects remain unresolved.

The system is considered stable, reliable, and ready for deployment and final submission.
